

BRIDGE & HEX REAMERS by STEELMAX

BRIDGE REAMER

Cutting & Drilling Accessories for Steel Fabrication

Steelmax Reamers are designed for aligning and enlarging holes in metal. Reamers are used to align existing holes prior to bolt or rivet installation. The point is tapered to permit entry into overlapping holes, which is common in many manufacturing applications. Ideal for use in both magnetic drilling machines, and or an impact wrench with additional adapter.

FEATURES

- 3/4" weldon shank
- For use directly in a magnetic drilling machine
- Can be used with an impact wrench when combined with our impact socket adapters
- Opens up holes in steel work
- Aligns holes to fit a bolt through two plates

SM-BR-03125	3/4" WELDON SHANK BRIDGE REAMER 5/16" - FLUTE LENGTH 2-3/4" - LENGTH 4-5/8"

HEX BRIDGE REAMER

Designed for when the bolt does not fit the hole. Designed with a hexagon head, ready to fit hex socket for use with an impact wrench.

Steelmax bridge reamers open up or align existing holes in steel when the bolt does not fit.

FEATURES

- Ideal for use with a heavy-duty impact wrench.
- Opens up existing holes in steelwork when the bolt will not fit.
- Aligns holes to fit the bolt through two plates.
- Fit into 1/2" or 3/4" drive hex socket.
